CP. acnes is also involved in infections of bone, joints and the central controvers by stem, however it is particularly involved in the inflammatory lesions associated with acre vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a comple with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The conjugation of antibodies generated for P. acnes proteins. These antibodies can be used to conjugate the expression and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and conjugate and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes polypeptides and activity of P. acnes poly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-APR-2000; 2000US-0199047P.

CC encoding a Propionibacterium access protein. The invention also relates to complypeptides encoded by the polypucleotides (ABM35624-ABM6436) and to compression fragments of P. access polypeptides. The invention and to comprising a golypeptide of the invention, antibodies against polypeptides of the invention; fusion proteins comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising a polypeptide of the invention; a comprising to a comes of the comprising of the invention; a comprising a polypeptide of the invention; a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprising to a comprision or antigen-presenting cells that express the polypeptide; a method and kit for detecting or determining the presence or absence of P. access in a comparison of a comprision or antigen-presenting cells that express the polypeptides, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating access to polypeptide acid hybridisation. The vaccine composition is useful for the comprision of an immune response specific for a P. access to polypeptide caid hybridisation. The vaccine composition is useful for the comprision. Note: The sequence data for this patent did not treating acceptance in a comparison. The present of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zhang

                                                                                                                                                                                                                      The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and therefore therefore are useful in diagnosis and therefore prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences or other sequences of pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed sequences are the production but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment c pathological conditions resulting from bacterial infection.
                                                                                                                                                                                Sequence 148

밁
          AAD07571-AAD07645 represent cDNAs corresponding to 25 human secreted protein genes, and AAE03126-AAE03126 represent the protein fragments they encode. AAE03127-AAE03150 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 25 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, footal and developmental
                                                                                                                                                                                                                                               Nucleic acids encoding 25 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. Gaucher's disease, Alzheimer's disease, Scimitar syndrome, Creutzfeldt-Jacob disease, diabetes mellitus and multiple sclerosis.
                                                                                                                                                                                                                 Claim 11; Page 480-481; 546pp; English.

The proteins can also be used to aid wound contained to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and contained above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Albumin fusion protein; therapeutic protein %; human albumin; HA; human serum albumin; HSA; cancer; reproductive disorder; digestive disorder; immune disorder; rendocrine disorder; haematopoietic disorder; neural disorder; connective disorder; cytostatic; antiinfertility; antiinflammatory; antiulcer; immunomodulator; anti-HIV; antidiabetic; haemostatic; nootropic; neuroprotective; antiparkinsonian; antimicrobial; neuroleptic; osteopathic; antiarthritic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to albumin fusion proteins comprising a therapeutic protein x and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention

The polypeptides, antibodies or antibody fragments that bind to the polypeptides, nucleic CC acids encoding the polypeptides, agonists or antagonists that binds to the polypeptide, are useful in preparing diagnostic or pharmaceutical C compositions for diagnosing, treating or preventing an e.g. immune CC disorders, inflammatory conditions (e.g. inflammatory bowel disease, nephritis or Crohn's disease), respiratory disorders (e.g. asthma and CC e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative (e.g. multiple sclerosis or ischaemic brain injury), neurodegenerative controlling gene expression through triple helix formation or antisense DNA or RNA, in gene therapy, for identification, chromosome CC mominute biological samples, in forensic biology, and as hybridization or antisense DNA or RNA, in gene therapy, for identifying individuals condition dodecyl sulfate polypeptides are useful for as molecular weight markers on CC gels, to raise antibodies, for testing biological activities, and for treating or preventing neural disorders, immune system disorders, and for treating or preventing neural disorders, immune system disorders, and consolitar, reproductive and/or cancerous diseases. This sequence corresponds to one of the polypeptide of the invention. Note: The sequence data for this patent did forms part of the printed specification, but was obtained of electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-10-030-271-3 (1-1883) x ADA57327 (1-211)

CC disorder in a mathematic protein, a method of treating a patient comprising the step of administering the stowner of the fusion protein, a method of treating a patient with a disease or disorder CC that is modulated by Therapeutic protein: X, or its fragment or variant; a nucleic acid molecule comprising a polymuclectide CC sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein, and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The CC albumin fusion protein and its compositions have the following the albumin fusion, antiarthritic, antiarthri
compulsive disorder), respiratory disease (e.g. emphysema, lung occupational lung disease), endocrine diseases (e.g. diabetes, disease or glomerulonephritis), digestive diseases (e.g. portal hypertension, irritable bowel disease, gastric atrophy or panor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New albumin fusion proteins, useful for diagnosing, treati
or ameliorating diseases or disorders e.g. cancer, anemia,
asthma, inflammatory bowel disease or Alzhelmer's disease.
                                                            or connective tissue or epithelial diseases (e.g. Crohn's disease, scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein x relating to the albumin fusion protein of the invention. The sequence listing data for this specification was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 369; 279pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alignment
                   The invention relates to a novel isolated nucleic acid molecule comprising a sequence that encodes a thioesterase or thioesterase domain, derived from a bacterial daptomycin biosynthetic gene cluster. The proteins of the invention have antibacterial, fungicide, virucide, antiparasitic, immunomodulator, antilipenic, and cytostatic activity. The polynucleotides may have a use in gene therapy. The compositions and methods of the present invention are useful for generating novel linear and cytolic peptides and improving yield of a product in a cell expressing an daptomycin non-ribosomal peptide synthetase (NRPS) to be used as new compounds or in producing new compounds, such as antibiotics, antifungals, antivirals, antiparasitics, antimitotics, antitumour agents, immunomodulatory agents, anti-cholesterolemic agents, siderophores, agrochemicals and cytostatics. The sequences shown in ABP62764-ABQ62808 represent proteins encoded by genes derived from a S. roseosporus
                                                                                                                                                                                                                                                                                  generating
                                                                                                                                                                                                                                                                                                                                                                                               (MIAO/)

The methods and compositions of the present invention are useful for treatment of a gram-positive bacterial infection of any organ or tissue in the body, including skeletal muscle, skin, bloodstream, kidneys, heart, lung and bone. This sequence represents a protein encoded by the daptomycin biosynthesis gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antibacterial; gene therapy; daptomycin biosynthesis daptomycin non-ribosomal peptide synthetase; DptBC; gram-positive bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       06-AUG-2001; 2001US-0310385P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         259
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     219
                                                                                                                                    Sequence 758, Application US/09925302

Patent No. US2020044941A1

GENERAL INFORMATION:
APPLICANT: Rosen et al.

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies
FILE REFERENCE: PA104

CURRENT APPLICATION NUMBER: US/09/925,302

CURRENT FILING DATE: 2001-08-10

PRIOR APPLICATION NUMBER: PCT/US00/05918

PRIOR FILING DATE: 2000-03-08

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 895

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 758

LENGTH: 319

TYPE: PRI

ORGANISM: Homo sapiens

Fequence 3, Application US/09733167

Patent No. US20020099009A1

GENERAL INFORMATION:
APPLICANT: Peter, Marcus
APPLICANT: Kzammer, Peter
TITLE OF INVENTION: Protein for Regulation of Apoptosis
FILE REFERENCE: 4121-120

CURRENT APPLICATION NUMBER: US/09/733,167

CURRENT FILING DATE: 2000-12-08

PRIOR APPLICATION NUMBER: German Patent Application No. US:

US-09-252-991A-17914

Sequence 17914, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: MOLETIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

Submitted (02-FEB-1999) Joint Genome Institute, Lawrence Livermore National Laboratory, 7000 East Ave., Livermore, CA 94551, USA Map and sequence oriented from q centromere to telomere. BAC 85722 (CIT-B-147B33) is separated from BAC 48537 (CIT-B-50E14) to the right by a gap of approximately 20 Kb. There is currently no
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

Insert size: 177000; agarose-fp
Insert size: 163958; sum-of-contigs
Quality coverage: 3.94 in Q20 bases; agarose-fp
Quality coverage: 4.25 in Q20 bases; sum-of-contigs
 Consensus quality: 146259 bases
Consensus quality: 153006 bases
Consensus quality: 156230 bases
 NOTE: This is a 'working draft' sequence. It currently consists of 36 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Quality coverage: 6.2 in Q20 bases; agarose-fp estimation Quality coverage: 5.84 in Q20 bases; sum-of-contigs estimation.

* NOTE: This is a 'working draft' sequence. It currently consists of 53 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are unknown.

* arbitrary Gaps between the contigs are unknown.

* This record will be updated with the finished sequence.
 as soon as it is available and the accession number be preserved.

 Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LLML at: http://image.llnl.gov Series: IRAK Plate: 81 Row: C Column: 16
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 23956157
This clone has the following problem: The cds is short compared to the longest cds in the locus.

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft\_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 29 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will

ě,

preserved

 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bem.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, and separated individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
 Submitted (09-NOV-2002) Human Genome Sequencing Center, Departed Molecular and Human Genetics, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA on Nov 9, 2002 this sequence version replaced g1:23267817.

 table.
 Direct Submission
 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
 (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and their order in this sequence record is
 NOTE: Estimated insert size may differ from sequence length
 as soon as it is available and the accession number will be preserved.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by MAPPING INFORMATION: restriction digest. This sequence was finished as follows unless otherwise noted:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. 1 MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org pBACe3.6

NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is RP11-9F10, 20 clone sequenced to the right is RP11-19A8, 2000 2000 bp overlap; 00 bp overlap. the

Single plasmid region exists between exist between AC087816 and AC091788.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SwiSSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived

 Chemistry: Dye-terminator Big Dye; 100% of reads consensus quality: 101999 bases at least Q400 Consensus quality: 106129 bases at least Q300 consensus quality: 109120 bases at least Q200 Insert size: 110882; sum-of-contigs Insert size: 166129; 8.1% error; agarose-fp Quality coverage: 3.01x in Q20 bases; sum-of-contigs Quality coverage: 2.86x in Q20 bases; agarose-fp
 NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

 Worley, K.C.
 Unpublished
 Similarity
 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
 as the comparative genome.

NOTE: This is a 'working draft' sequence. It currently consists of I contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
 This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

1 122976: contig of 122976 bp in length.
Location/Qualifiers
 NOTE: The contigs are based on the application - of the PGI method using the Human genome (NCBI build 31)
 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20 Consensus quality: 16106 bases at least Q20

Homo sapiens 141,272 genomic DNA of 11q Published Only in DataBase (2000) 2 (bases 1 to 141272) Hattori,M., Ishii,K., Toyoda,A., Taylor,T.D., Hong-Seog,P., Fujiyama,A., Yada,T., Totoki,Y., Watanabe,H. and Sakaki,Y., Direct Submission
 22;
 and Chemical Research (RIKEN), Genomic Sciences Center (GSC); 1-7-22 Suehiro-chou, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:hattori@gsc.riken.go.jp, URL:http://hgp.gsc.riken.go.jp/, Tel:81-45-503-9111, Fax:81-45-503-9170) On Jan 22, 2001 this sequence version replaced gi:9927283.
 Mammalia; Eutheria; Pr
1 (bases 1 to 141272)
Hattori, M., Ishii, K.,
 Homo sapiens genomic DNA, chromosome 11q, clone:RP11-179A16.
 22543 22694 D11S2068 11 Homo sapiens.
Location/Qualifiers
 Submitted (02-MAY-2000) Masahira Hattori, The Institute of Physical
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

 Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage : Bp 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of invitrogen.
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 1053)

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the PCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

U1-E-DW1 is a normalized CDWA library containing the
following tissue(s): lens. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded CDNA was ligated to an Ecox I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is CGATTACGA. This library
was created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI).

UI-CF-EN1 is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTGCTCAGGT.

polylinker; Site 1: EcoR I; Site 2: Not I; NCI_CGAP_FEO is
a cDNA library containing the following tissue(a): a pool
of 3 chondrosarcoma cell lines (grade 2) The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT773-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
CGCTACGGAC.The cell lines was provided by Dr James Martin
off University of Towa.

/note="Organ: Lung; Vector: pT773-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; UI-CF-EC1 is a normalized cDNA library containing the following tissue(s): Normal lung from adult and from fetal day 64, day 87, week 19 and week 42. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-off primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonuclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (AT).18 tail. The sequence tag for this library is

 CC The invention relates to a novel human apoptosis-associated factor CC (AAB60386, AAB60387), designated NTZRM100558, which contains a death CC effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408); variants of the protein CC (particularly dominant negative variants); vectors and host cells CC comprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody CC against the protein; and methods of screening for compounds which can CC regulate apoptosis. The apoptosis related factor is useful in regulating CC diseases associated with cell proliferation and in screening drug condidates e.g., for regulating cell proliferation or cell death in candidates e.g., for regulating cell proliferation or cell death in considerate afull-length cDNA encoding the human apoptosis-associated CC represents a full-length cDNA encoding the human apoptosis-associated CC factor NTZRM1000558

 24-MAR-1999;
17-JUN-1999;
18-AUG-1999;
 The invention relates to the isolation of genes encoding 9 human apoptosis-related proteins. The nucleotide sequences AAA95790-A95798 encode the human apoptosis related proteins BAB1551-B1559. The genes can be used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fc (IgG Fc) portion (AAA95799) for increasing the stability of the fusion protein as compared to the human protein only. The gene and encoded protein may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate apoptosis associated protein expression, e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas), inflammation, autoimmune disorders (e.g. cancer (e.g. colon, breast and prostate cancer, melanomas and lymphomas) and viral infections (e.g. herpes)
 Cytostatic; antiinflammatory; immunosuppressive; antisclerotic; cardiant; virucidal; anti-AIDS; vasotropic; anti-ischaemic; antiparkinsonian; ss; anti-Alzheimer; gene therapy; human; apoptosis; fusion protein; cancer; colon; breast; prostate; melanoma; lymphoma; inflammation; herpes; autoimmune disorder; multiple sclerosis; viral infection.
 Nucleic acids encoding human apoptosis associated protein, useful for the prevention, treatment and diagnosis of e.g. Alzheimer's and Parkinson's disease, inflammation and ischemic injury.

 CC cancer-associated nucleic acid molecules (N) and proteins (P), where the color cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For cexample, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. capuese 666 to 682 and page 7053 of the sequence listing were missing at the colorect. Pages 666 to 682 and page 7053 of the sequence listing were missing at the colorect.
 Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DD) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED or NB-ARC CC (COMBD (NGFR-interacting Death Domain), with a candidate binding agent and CC detecting the association of the domain and the candidate binding agent and CC py yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC chemical crosslinking, nuclear magnetic resonance (NMR), mass CC spectroscopy (MS) and FPA. The invention is useful for modulating the CC level of a cell process such as cell proliferation, cell adhesion, cell stress responses, responses to microbial infection and B cell. CC immunoglobulin class switching, in particular apoptosis within a cell. CC antibody specifically reactive with CTDD DD of C. trachomatis, C. CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the CTDD DD protein is useful for detecting a Chlamydia infection. The cc invention is useful for modulating the activity of oncogenic proteins,

 for treating a pathology caused by the oncogenic proteins and for treating bacterial infections by modulating the activity of bacterial proteins. The protein and antibody specific for it are useful for discovery of drugs that suppress infection, inflammation, allergy, sepsis, autoimmunity, allograft rejection and other diseases. The protein is useful for treating immune-based pathologies, pathologies associated with cell division, inflammatory diseases such as sepsis, fibrosis, arthritis, graft versus host disease. The invention is used in antisense therapy and gene therapy. The present sequence is human DED4 gene

The present invention provides novel death Domain (DD) and death effector CC domain (DED) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor creceptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DED or NB-DAC domain a candidate chart modulates the association of a DD, DED or NB-ARC domain with protein ct that binds the DD, DED or NB-ARC domain. The invention is also useful for cell proliferation, cell stress responses, responses to microbial confection and B cell immunglobulin class switching. DDs DBD and NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allergy, allograft rejection, sepsis and other diseases. CC DD, DED or NB-ARC domain proteins are used to treat infection, allergy, autoimmunity, inflammation, allograft rejection, sepsis, keratinocyte inflammatory hyperplasia and smooth muscle cell proliferation in arteries contibody therapy and gene therapy. The present sequence is human DED4 cull length gene. The DED4 gene is located on chromosome 19

 CC Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer
CC associated proteins represented in AABS8106 - AABS8548. Lung cancer
CC associated proteins and polynucleotive sequences, their agonists, and
CC antagonists may have neuroprotective; cytostatic; cardioactive;
CC immunomodulatory; muscular active general; vulnerary; gastrointestinal
CC general; nephrotropic; antiinfective; gynecological; or antibacterial
CC activity. The invention also includes antibodies specific for the protein
CC or polynucleotide sequences. The lung cancer associated polynucleotide
CC identification, as chromosem markers, and for numerous other diagnostic
CC or research purposes. The proteins may be used to treat disorders such as
CC neural, immune, muscular, reproductive, gastrointestinal, pulmonary,
CC cardiovascular, renal, and proliferative disorders. The proteins may also
De used in the treatment of wounds and infectious diseases.
CC used in the course of the invention for the identification and

 The present sequence encodes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) protein and signated protein of the DEDD2 gene, and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and choose the contest of the kidney.

(particularly dominant negative variants); vectors and host cells comprising a nucleic acid which encodes an apoptosis- associated factor of the invention; the recombinant production of the protein; an antibody against the protein; and methods of screening for compounds which can regulate apoptosis. The apoptosis-related factor is useful in regulating diseases associated with cell proliferation and in screening drug candidates e.g., for regulating cell proliferation or cell death in schemic diseases and chronic viral diseases. The present sequence represents CDNA encoding a substantial proportion of the human apoptosis-associated factor NTZRM1000558
 The invention relates to a novel human apoptosis-associated factor (AAB60386, AAB60387), designated NT2RM1000558, which contains a death effector domain (DED) and a caspase family cleavage domain and is capable of inducing apoptosis in cells. The invention also relates to nucleic acids encoding the protein (AAF27407, AAF27408), variants of the protein acids encoding the protein (AAF27407, AAF27408), variants of the protein
 Polynucleotide encoding an apoptosis-associated factor protein with death effector domain and caspase family-cleavage domain, useful in regulating diseases with cell proliferation.
 Human, apoptosis-associated factor; NT2RM1000558; death effector DED; caspase family cleavage domain; pro-apoptotic; drug screenin cell proliferation; ischaemic disease; chronic viral disease; ss.

 CC response. The invention also relates to a method of diagnosing or comprising obtaining nucleic acids from a sample, conditioning the treatment of an immunopathological condition in a sample, conditions to form one or more hybridisation complexes, detecting the conditions to form one or more hybridisation complexes, detecting the hybridisation complexes with the level of hybridisation complexes with the level of hybridisation complexes with the presence of an expression profile comprising a microarray and a plurality of detectable complexes and a comparising the revel of the detected induspathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comparising a microarray and a plurality of detectable complexes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray can be used in the diagnosis of an immunopathology, such as Crohn's disease, asthma, culterative colitis, hypereosinophilia, irritable bowel syndrome, contentifying agents for the treatment of the diseases. The microarray may contentifying agents for the treatment of the diseases. The microarray may considered in drug discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomics. The composition companies for microarray and development, toxicological and the printed specification but was obtained in electronic format directly from tight of confidence that
 A composition comprising a plurality of cDNAs, useful for detecting altered expression of genes in an immunological response or for diagnosing and treating an immunopathology, e.g. Crohn's disease, asthma or osteoarthritis.
 Human; gene; ss; immunological response; immunopathological condition; Crohn's disease; asthma; ulcerative colitis; hypereosinophilia; irritable bowel syndrome; osteoarthritis; rheumatoid arthritis; acute monocytic leukaemia; antiinflammatory; antiasthmatic; antiulcer; osteopathic; antiarthritic; antirheumatic; cytostatic.
 The invention relates to a composition comprising a plurality of cDNAs for detecting the altered expression of genes in an immunological response. The invention also relates to a method of diagnosing or

 CC The present invention relates to the isolation of novel cDNA sequences CC which encode human secreted proteins. The cDNA sequences have been CC derived from a variety of human tissues. The invention also provides a CC method for producing proteins from these polynucleotide sequences. The crowded for producing proteins from these polynucleotide sequences. The collision are useful for identifying compounds that modulate their compounds that modulate expression of the polynucleotide sequences compounds that modulate expression of the polynucleotide sequences compounds that modulate expression of the polynucleotide sequences (e.g. encoding the secreted proteins. The sequences of the invention are useful corrections diseases such as hyperproliferative disorders (e.g. cancer), immune deficiency disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis), blood disorders (e.g. thrombocytopaenia), inflammatory disorders (e.g. arthritis) and confectious disorders (e.g. hepatitis). The polynucleotide sequences of the invention are also useful in gene therapy. AAS62214-AAS62838 CC represent the cDNA sequences of the invention that encode for novel human conference of the invention are also useful in gene therapy.

AAH99166 to AAH99904 encode the human proteins given in AAM2525 to AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification, where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the

 specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13638 and AAH13638 to AAH13742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent cligonucleotides, all of which are used in the exemplification of the

 The invention relates to human nucleic acids (AAI57798-AAI61369) and the cencoded polypeptides (AAMA8642-AAM42213) with nootropic, immunosuppressant and cytostattic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as a lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form or the printed specification

 The invention describes an isolated polynucleotide (I) comprising a fully defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041, 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as given in the specification, its translated or protein coding portion, its extracellular portion or its active domain. The GPCR-like polypeptides and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological and nephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and diabetes. The antibodies are useful for detecting or quantitating the polypeptide in trissue. The polypeptides can also be used as molecular weight markers and as a food supplement. This sequence represents a human polynucleotide of the invention.
 ADB48943 standard; cDNA;
 New G-protein-coupled receptor-like polypeptides and polynucleotides, useful for treating diseases of ophthalmic, neurological, immunological and nephritic systems and hormonal dysfunction, cancer, atherosclerosis and diabetes.

 The invention relates to a polynucleotide comprising a sequence given in the specification, or its mature protein-coding portion, or its complement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at sequance.html?DocID=20030104529.

 The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
 Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

The invention relates to an isolated polynucleotide comprising any one 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH Requencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for

was

of.

ç

New polynucleotide sequences obtained from various cDNA libraries, as hybridization probes, as oligomers for PCR, for chromosome and emapping, in the recombinant production of protein, or in generating

02-MAY-2000;
 A single-stranded DNA (or its complementary strand or the corresp. double stranded DNA) which comprises one of the 7837 "GS" sequences given in AAT19001-726837 and which is able to hybridise to part of human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'- untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for recognising different cell types

 which encode human secretory or membrane proteins represented by AAB8317 CC - AAB8419. Included in the invention are primers AAF93917 - AAF9295 and CC AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the CC invention. The invention also includes methods for the production of CC invention. The polynucleotide sequences and the proteins the production of the used in vaccines. The polynucleotide sequences can be used in gene CC used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The CC used in the preventary sequences and the proteins they encode may be used in the preventary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. CC They may also be used as antigens in the production of secretory proteins/membrane polypeptides and their role in metabolism. The CC antagonists of expression and activity. The antibodies and antagonists of expression and activity. The antibodies and antagonists of captagonists of expression and activity. The antibodies and antagonists of captagonists of expression and sequences in samples (e.g. by enzyme CC linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes

 The invention relates to an isolated polynucleotide comprising any one of CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also CC included is a purified polypeptide comprising a sequence corresponding to CC are useful in diagnostics as expressed sequence tags (EST) for are useful in diagnostics as expressed sequence tags (EST) for CC identifying expressed genes or for physical mapping of the human genome, CC in forensics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, CC for chromosome and gene mapping, in the recombinant production of CC protein, or in generating antisense DNA or RNA. The purified polypeptide is useful for generating antisense DNA or RNA. The present sequence constant of the stendard polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data CC for this patent did not form part of the printed specification, but was constanted in electronic format directly from USPTO at

 The present invention describes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigatic of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia. The present sequence represents a PCR primer which is used in an example from the present invention.

 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, communosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activiny, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and court of the activity, arthritis and inflammation, leukaemias and court of the contents of the sequence data for this patent did not form

 The invention describes an isolated polynucleotide (I) comprising a fully defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041, 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as given in the specification, its translated or protein coding portion, its extracellular portion or its active domain. The GPCR-like polypeptides and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological and nephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and diabetes. The antibodies are useful for detecting or quantitating the polypeptide in tissue. The polypeptides can also be used as molecular weight markers and as a food supplement. This sequence represents a human polynucleotide of the invention.
 New G-protein-coupled receptor-like polypeptides and polynucleotides, useful for treating diseases of ophthalmic, neurological, immunological and nephritic systems and hormonal dysfunction, cancer, atherosclerosis

 The invention relates to a polynucleotide comprising a sequence given the specification, or its mature protein-coding portion, or its complement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Not The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPT

 The present invention describes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia. The present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a PCR primer which is might be a controlled to the present sequence represents a primer which is might be a controlled to the present sequence and the present sequence represents a primer and protection and

 The present invention describes a human death effector domains (DED) containing DNA-binding protein (DEDD) protein, designated DEDD2, that causes cell death. Also described: (1) primer and probe for investigation of the DEDD2 gene; and (2) reagents for gene therapy. DEDD2 has cytostatic activity. DEDD2 can be used in the diagnosis and treatment of cancers of the kidney, large intestine and prostate, and acute and chronic myeloid leukaemia. The present sequence represents a PCR primer which is used in an example from the present invention.
 The present invention relates to ATP synthetase 11.55 (see ABP59171). protein can be used for treating diseases such as cancer and HIV infection. The present sequence is a PCR primer, which was used in an

 polynucleotide which anneals with the marker or anneals with a portion of the polynucleotide comprising the marker, under stringent conditions. The marker is also used for monitoring the progression of ovarian cancer in a patient which involves detecting expression of the marker in a patient sample at a first point in time, repeating the method at a subsequent time and comparing the level of expression. The method is carried out using an ovarian tissue sample. A composition comprising a marker, polypeptide or antibody of the invention is used to treat ovarian cancer. This sequence represents a human ovarian cancer DNA marker of the
 the patient an antisense oligonucleotide complementary to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer, which involves comparing the level of expression of a marker in a patient sample and a normal level of expression of the marker in a control non-ovarian cancer sample. A difference between the expression levels indicates ovarian cancer. The level of expression of a
 The invention relates to nucleic acid markers which are overexpressed in ovarian cancer cells as compared to their expression in normal (i.e. non-cancerous) ovarian cells. The invention also relates to polypeptides encoded by the markers, antibodies that selectively bind to the polypeptides, a method of inhibiting ovarian cancer in a patient at risk of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient of the invention and a method of treating a patient afflicted with ovarian cancer comprising providing to cells of the patient of the invention and a method of treating a patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprising providing to cells of the patient of the comprision provides the comprision of the comp
 marker corresponds to a secreted protein or to a transcribed polynucleotide or its portion. The level of expression of the marker is assessed by detecting the presence in the sample, a protein or protein fragment corresponding to the marker. The presence of protein or protein fragment is detected using an antibody that specifically binds with the protein or protein fragment. Alernatively, the level of expression of the marker is assessed by detecting the presence of a transcribed

 The invention relates to identifying pain-regulating substances (A) comprises (I) incubating a test substance with a cell (or preparation from it) that has synthesised a peptide or protein (B) and (ii) measuring either binding of the test substance to (B) or some functional parameter that is altered by this binding. The method is useful for identifying pain-regulating substances (A) with analgesic activity. (A) along with nucleic acid (ABLB8411-ABL88441) that encode proteins (B, ABB85006-ABB85037) that interact with (A); (B); vectors containing the nucleic acid; antibodies against (B); cells that express (B) and agents that bind to (B), are all useful for treating pain, particularly chronic pain, including use in gene therapy. The same materials can also be used for diagnosis, e.g. of neurological and neurodegenerative diseases. The

 CC The invention relates to a novel human apoptosis-associated factor CC (AABS0386, AAB60387), designated NTZRM100558, which contains a death CC effector domain (DED) and a caspase family cleavage domain and is capable CC of inducing apoptosis in cells. The invention also relates to nucleic CC acids encoding the protein (AAF27407, AAF27408); variants of the protein (Particularly dominant negative variants); vectors and host cells CC comprising a nucleic acid which encodes an apoptosis - associated factor CC against the protein; and methods of screening for compounds which can CC regulate apoptosis. The apoptosis-related factor is useful in regulating CC diseases associated with cell proliferation and in screening drug CC candidates e.g., for regulating cell proliferation or cell death in ci schaemic diseases and chronic viral diseases. The present sequence CC represents a PCR primer used to amplify CDNA encoding the human apoptosis vectors.

The invention relates to an isolated polypeptide comprising a death CC domain (DD), death effector domain (DED) or NB-ARC domain. The invention CC is useful for identifying a binding agent, preferably a protein or a drug CC that binds a DD, DED or NB-ARC domain. By contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain, by contacting a DD, DED or NB-ARC domain by contacting a DD, DED or NB-ARC domain.

CC domain from DAP3, IRAK4, CTDD (Chlamydia trachomatis DD protein), DED4 or CC detecting the association of the domain and the candidate binding agent, by yeast two hybrid assay, immunoprecipitation, SPA, ultraviolet (UV) or CC control of a cell process such as cell proliferation, SPA, ultraviolet (UV) or CC divers responses, responses to microbial infection and B cell continuouslobulin class switching, in particular apoptosis within a cell continuouslobulin class switching, in particular apoptosis within a cell continuouslobulin class switching, in particular apoptosis within a cell.

CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the convention is useful for detecting a Chlamydia infection. The CC muridarum, C. pneumoniae, and C. psittaci or a nucleic acid encoding the convention is useful for modulating the activity of nonogenic proteins, CC for treating a pathology caused by the oncogenic proteins and for C treating bacterial infections by modulating the activity of bacterial convention. The protein and antibody specific for it are useful for convention inflammation, allergy, inflammatory diseases such as sepsis. The protein convention is useful for inflammatory diseases such as sepsis. Sibrosia, camblifying primer therefore therapy. The present sequence is human DED4 CDNA
 allergy, sepsis, autoimmunity, allograft rejection and other diseases.

 밁
 Ś
 The present invention provides novel death Domain (DD) and death effector CC domain (DBD) proteins and nucleic acids encoding them. The invention also CC provides death domain containing protein such as Chlamydia trachomatis CC death domain containing protein (CTDD) DD and neural growth factor (ecceptor-interacting death domain (NIDD) DD. The invention is useful for CC identifying a binding agent (e.g. protein or drug) that binds a DD, DED CC or NB-ARC domain from DAP3, IRAK4, CTDD, DEM or NIDD with a candidate CC binding agent and identifying an effective agent (e.g. protein or drug) CC that modulates the association of a DD, DED or NB-ARC domain with protein CC that binds the DD, DED or NB-ARC domain. The invention is also useful for CC modulating the level of cell process such as apoptosis, cell adhesion, CC infection and B cell immunoglobulin class switching. DDs, DEDs and NB-ARC domain antibodies are CC domains and/or anti-DD, anti-DED or anti-NB-ARC domain antibodies are useful for discovery of drugs that suppress infection, autoimmunity, inflammation, allograft rejection, sepsis and other diseases. CD, DED or NB-ARC domain proteins are used to treat infection, allergy, allograft rejection, sepsis, keratinocyte (continuous process), keloid, benign prostatic hypertrophy, fibrosis, CC inflammatory hyperplasia and smooth muscle cell proliferation in arteries of contibody therapy and gene therapy. The invention is also used in antibody therapy and gene therapy. The present sequence is a primer used continuous process.

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
